Heroku Addons

Some things

`head.haml` * Doctype, HEAD, header, 'featured' image

`foot.haml` * footer... copyright & social networking

`page.haml` * Sets up the page content (i.e. heading,

) * grabs the relevant content from `pagename.haml`

`other .haml files` * info to be displayed on pages * routing is `/pages/pagename`, which will grab info from `pagename.haml` (`/pagename` also works) * only files that need to be edited to add content

`projects.json` * Used to store the projects we're currently collecting donations for. * Should be stored in a database and not a JSON file * This is temporary...

`MongoDB` * Used MongoDB to store user information * This was done simply because it was the easiest and cheapest * Feel free to use whatever...

Extending it for your (chapter's) use

Feel free to reuse this for your own chapter (or personal use). If you make something better, submit a pull request.
